Abstract: *This article describes the different approaches to the subject of research, the essence of the problem of income generation from current activities. According to the results of the study of different approaches to the essence of the concept of income from current activities, the author's definition was formulated.*

Determination of income from current activities, current activities, income, income from current activities, revenue from sales of products (works, services), economic benefit

JEL classification 657

In the Republic of Belarus, the main regulatory document regulating the accounting of income and expenses is the instruction on accounting of income and expenses approved by the Resolution of the Ministry of Finance of the Republic of Belarus dated 30.09.2011 №102. This instruction is an element of state regulation of accounting and reporting in the Republic of Belarus and is used in the recognition, evaluation and disclosure of information in accounting and reporting for income and expenses, in the approximation of international financial reporting standards.

We systematize the analysis of approaches to the essence of the concept of income in table 1.1. that will help us to form the author's definition in the future.

Table 1. Approaches to the definition of the concept of „Income”

|--|--|

Note: own development based on the study of special economic literature and regulations.

As can be seen from table 1.1, the regulatory documents of the Republic of Belarus, the Russian Federation, the Republic of Ukraine on accounting treat income as an increase in economic benefits (assets) or a decrease in liabilities. Thus, the instruction on accounting of income and expenses, approved by the Resolution of the Ministry of Finance of the Republic of Belarus dated 30.09.2011 №102 (hereinafter – instruction 102) establishes that income is an increase in economic benefits during the reporting period by increasing assets or reducing liabilities, leading to an increase in the equity of the organization, not related to the contributions of the owner of its property (founders, participants).

The authors of the economic dictionaries Raizberg B. A., Lozovskiy L. S., Starodubtseva E. B., Ushakov D. N. F. A. Brokgauz, I. A. Efron, M. McMillan, A. N. Azilian, as well as authors of textbooks on Economics Alain Baton, Antoine Cazorla, Christine Dollo, Ann Marie Dreux, G. P. Zhuravleva, I. M. Lemeshevskaya in the opinion that income is the money or goods received as a result of any activity for a certain period of time.

From the point of view of the authors of textbooks on economic theory PS Eschenko, Yu Palkin and Frolova TA, income – is the proceeds from the sale of products (works, services) minus material costs.

An interesting and not similar to all the above opinion about the concept of "income" expresses the famous financier of the 19th century Karl Marx in his work "Capital" (1867).

K. Marx defines income as the surplus value received as a result of the movement of capital. The reason for this is that capital needs to continuously produce surplus value and constantly reproduce it in order for it to continue to exist. Creating surplus value, capital must be re-applied to the second to create one, etc. Therefore, capital yet again produce surplus value and reproduce it. Surplus value acts as a constantly reviving fruit of the capital in motion, as a constant income from capital, as a profit [12].

In our opinion, income is an increase in economic benefits resulting from the receipt of assets and repayment of liabilities, leading to an increase in the capital of this organization, except for the contributions of participants.

Since income can be derived from various activities, it is advisable to analyze the different approaches to the essence of determining income from current activities. Current activities are the main income-generating activities of the organization and other activities not related to financial and investment activities. [4]

Table 1.2 systematizes approaches to the concept of "income from current activities" of authors of special literature on accounting and regulatory documents of the Republic of Belarus, the Russian Federation.

Table 1.2. Approaches to the definition of the concept «Income from current activities»

| The name of the literature source / author, year | The definition |

Levkovich [et al.]; under the General ed. - third edition, revised and expanded-Minsk: Amalfea, 2012. - 728 p. | income from the sale of finished products, goods and semi-finished products of own production.[31] |
| 4. Management accounting: lecture notes / O. V. Grishchenko.- Taganrog: TTI yufu, 2007. | The result of management of the main activity.[36] |
| Literature on economic theory | |
| 5. Enterprise Economics: lecture notes / T. A. Frolov. - Taganrog: TTI SFU, 2009. | revenue from sales of products (works, services) less material costs.[6] |

Note: own development based on the study of special economic literature and regulations

The instruction on accounting of income and expenses approved by the Resolution of the Ministry of Finance of the Republic of Belarus of 30.09.2011 No. 102 (in the edition of the resolution of the Ministry of Finance of 08.02.2013 No. 11) recognizes as income from current activity proceeds from sale of production, goods, works, services, and also other income from current activity [17]. Approximately the same definition is found in the Regulation on accounting "Income of the organization" PBU 9/99, approved by the Order of the Ministry of Finance of May 6, 1999 № 32n (in the ed. Order of the Ministry of Finance of 08.11.2010 №144n).

The author of the economic literature T. A. Frolova also characterizes the income from current activities by revenue from the sale of products (works, services) minus material costs. [11]. This approach to the concept of "income from current activities" takes 60% of all the studied approaches. By 20% of the total amount is occupied by the definition of the essence of the concept of "income from current activities" as income from the sale of finished products, goods and semi-finished products of own production (A. O. Levkovich) and as a result of management from the main activity (O. V. Grishchenko).

Thus, in our opinion, the income from current activities is the revenue from the sale of goods, works and services received in the course of the main activity of the organization.
